

# KNIFE - CUTTER - BAYONET KCB - 70

DE KRUIHOORN N.V., s-HERTOGENBOSCH, HOLLAND

The firm of Eickhorn, Solingen, and NWM De Kruihoorn N.V., 's-Hertogenbosch, as a joint venture, have designed and developed a new type of combat knife, which can be used as a wire cutter, as a bayonet and as an emergency saw.

The KCB 70 has been constructed to allow the cutting of high tension wires with a voltage of up to 20,000 Volts, by isolating the scabbard and the knife-handle from the metal parts.

An extension at the end of the scabbard is formed to be used as a large screw-driver.

The handle is partly hollow and can be used as a container. The sight adjustment tool for the Stoner 63A1 Weapons is fitted inside, but any other part - if the dimensions are right - can be put in according to the customer's wishes.

The following pictures show the use of the KCB 70 which, as a bayonet, can be fixed on the Stoner 63A1 Weapons, e.g.:

Rifle	XM 22
Carbine	XM 23
MG	XM207
and the M16	

If required, the fixtures for mounting the bayonet can be adapted to any other weapon.

#### Details of KCB 70

Total length . . . . .	303 mm (11.9 inch)
Length of the blade . . . . .	175 mm ( 6.9 inch)
Width of the blade . . . . .	30 mm ( 1.2 inch)
Weight with scabbard . . . . .	0,480 kg ( 0.90 lbs )
Weight knife only . . . . .	0,250 kg ( 0.55 lbs )
Electrical isolation . . . . .	up to 20,000 Volts.
